CDG Valve Manufacturer

## COMPANY HISTORY

- 
- 1963 : Founded CDG.
  - 1985 : CDG brand creation.
  - 1989 : Production of pneumatic actuators, and Italy FABIA to establish cooperation.
  - 1992 : With the United States FAIRCHILD cooperation,Production of electric actuators.
  - 2001 : Focus on the production and assembly of CDG.
  - 2005 : Production of hydraulic actuators.
  - 2006 : Production of valves.
  - 2011 : Oil station development and use.
  - 2016 : Set up a number of representative offices in China.
- 

## Company introduction

---

The CDG is a famous valve manufacturers, the company is headquartered in America's largest city, Detroit, Michigan is located in the northeastern United States, Canada, Detroit river north of Windsor an important port city. With strong industrial base and freight advantage.

CDG products have unique design, short delivery time, competitive price and excellent after-sales support. As a professional manufacturer of valves, it quickly became the industry leader.

CDG has more than 50 years experience in the valve industry. The r&d department USES these experiences to constantly design new products, improve existing products, and adapt to changing market demands and constantly improving international standards.

CDG can provide standard and non-standard solutions that can be customized according to customer needs.

CDG has created a wide range of reliable products. CDG is favored and admired by the world's leading EPC and oil and gas companies because of its high performance in extreme conditions. Its products are

used in power plant, petrochemical, metallurgy, papermaking, automobile and more Product certification based on customer requirements and government legislation is a guarantee of product quality. CDG USES advanced testing laboratories to ensure the durability of its products. Fire safety, high temperature and low temperature testing can be carried out under extreme conditions.

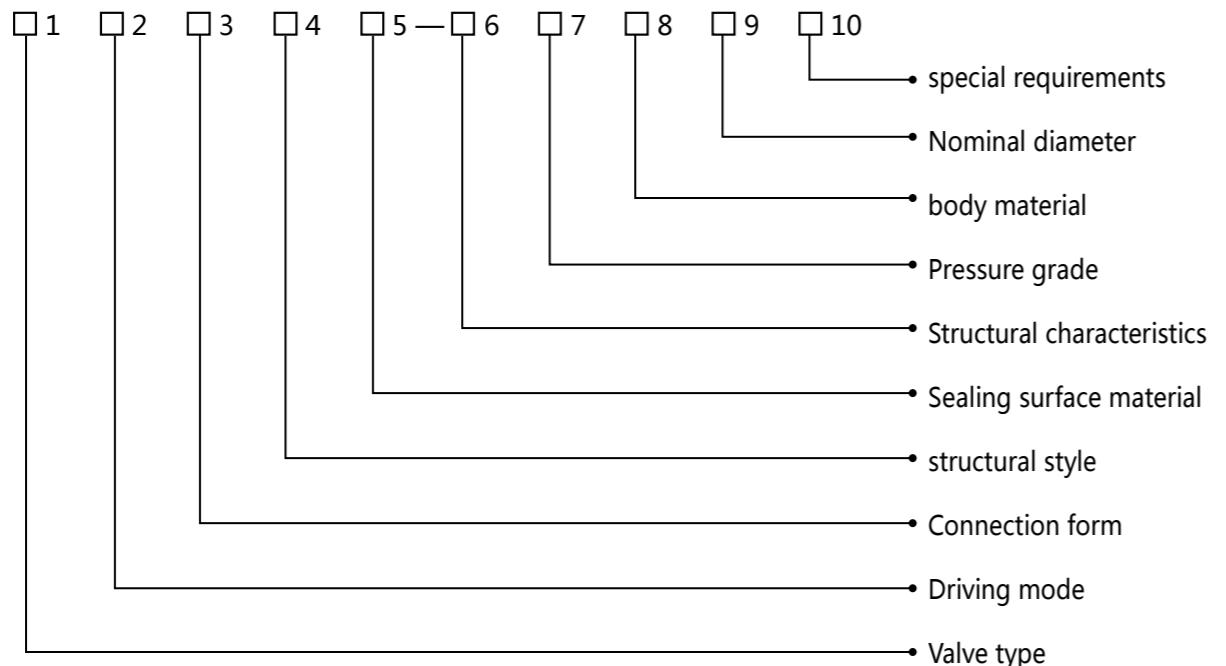

CDG good position, provide comprehensive after-sales support, fast, efficient, with unparalleled expertise. Our skilled engineers and technicians work 24 hours a day to respond to customer queries, solve problems, and provide reliable solutions. A comprehensive after-sales service creates a complete solution, customer support, covering all requirements.

CDG is a long-term, reliable, available and cost- effective partner for your existing and new business.

CDG brand is comprehensive, including valve and oil station, pneumatic actuator, electric actuator and hydraulic actuator and other related fields. To enable CDG to meet different needs it can be sold separately, and can be matched in a complete set, so that users can reduce their worries.

CDG ball valves are widely used in petroleum refining, long-distance pipeline, chemical industry, papermaking, pharmaceuticals, water conservancy, electric power, municipal administration, steel and other fields, especially in oil, natural gas, national oil storage and oil refining cracking units. Its strength, safety and resistance to harsh environment have been specially considered in the design. It is suitable for all kinds of corrosive and non-corrosive media. Different materials can be used to transport water, steam, oil, natural gas, nitric acid, acetic acid, oxidizing media, urea and so on. Ball valve has compact structure, reliable sealing, sealing surface and spherical surface are often in closed state, not easy to be eroded by media, easy to operate and maintain.

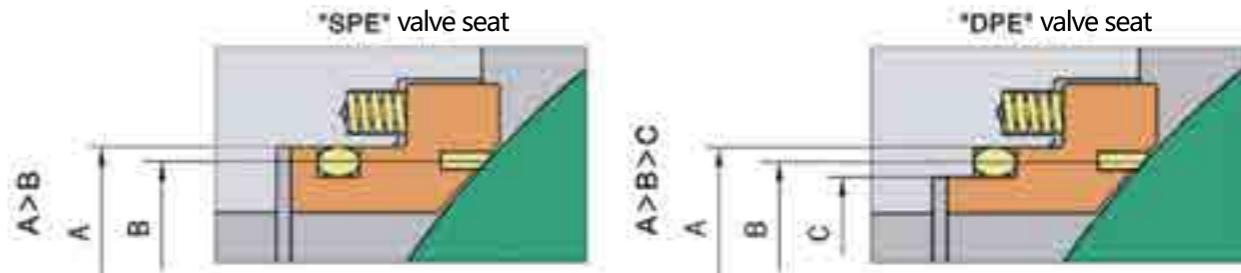

## Description of Model Formulation

1. Valve Type Code: BA-Ball Valve
  2. Driving mode code: 2-electro-hydraulic, 3-worm, 5-pneumatic-hydraulic, 6-pneumatic, 7-hydraulic, 9-electric (handle drive strategy)
  3. Connection form code: 4-flange, 6-butt welding, 8-clamp
  4. Structural form code: 7-through fixed, 8-fixed T-type and 9-fixed L-type three-way
  5. Sealing material code: Y-cemented carbide, F-polytetrafluoroethylene (PTFE) FS-PTFE+carbon fiber FC-PTFE+carbon fiber+copper, H-iron base alloy, M-Monel alloy
  6. Structural characteristics code: W-fully welded structure, d-forged steel, g-high pressure, s-three-stage type
  7. Pressure Grade Code: Nominal Pressure Scale is Actual Number
  8. Valve body material code: C-WCB, I-WC6, V-WC9, R-CF8M, S-CF3, L-CF3M, F-LCB, O-CF8, P-F91
  9. Nominal Path Code: Inch
  10. Special Requirements Code: S-Sulphur Resistant, L-Low Temperature, X-Lengthened Rod, I-Insulation
- Note: Carbon steel valve body, omit this code

## Piston effect of seat

Piston effect is a kind of sealing form that uses pipeline pressure to push floating seat close to sphere. It can be divided into single piston (SPE) effect and double piston (DPE) effect.

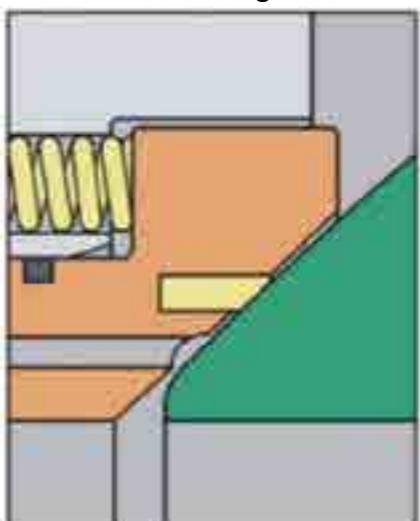

Single piston or double piston effect can be used for upstream and downstream valve seats according to engineering requirements, including the following three combinations:

1. When the upstream and downstream seats are single piston effect, the ball valve is upstream sealed, and the overpressure of the valve chamber is automatically released to the downstream pipeline through the downstream seat.
2. When both upstream and downstream seats are double piston effect, the ball valve is sealed both upstream and downstream, that is, once the upstream seals fail, the downstream seats can still ensure the sealing and ensure the long-term effective operation of the valve. But it loses the function of internal self-discharging of valve chamber overpressure.
3. The upstream seat is a single piston effect. When the downstream is a double piston effect, the ball valve is sealed both upstream and downstream. The overpressure of the valve chamber is automatically relieved to the upstream pipeline through the upstream seat. It not only improves the sealing reliability, the overpressure of the valve chamber and the internal self-discharge, but the valve has the requirements of the main installation direction.

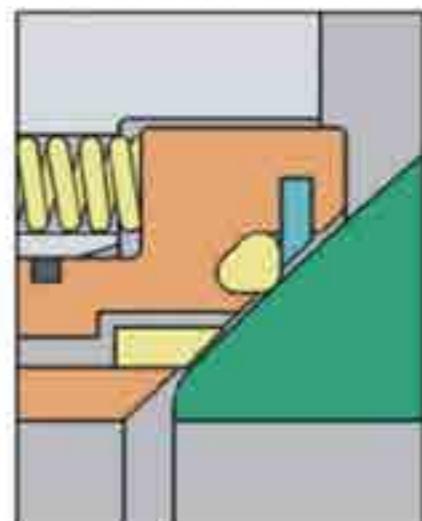

## Sealing structure between seat and sphere

1. Traditional soft seals: Embedded soft seals are polymer-to-sphere seals. Applicable to all calibers and pressure levels.
2. CDG combined seal: soft seal made of special elastomer material is used as main seal to ensure zero leakage required by API6D standard; metal quasi-seal between valve seat and spherical surface is used, and an RPTFE quasi-seal is added to protect main seal and improve service life under some working conditions. This patented structure is particularly suitable for the harsh working conditions of dusty natural gas and sandy crude oil.

Traditional sealing structure

CDG combined seal structure

## Structure characteristics

The stem is designed for blowout prevention to prevent it from ejecting from the valve body due to improper operation.

The valve stem and the sphere are independent of each other, and the valve stem is not affected by the lateral load acting on the sphere by the medium.

Stem seal design is independent of the upper and lower two groups. The lower group consists of O-ring and V-ring. The seal is durable and reliable. The upper group is fire safety seal. The upper seal can be safely replaced at zero to maximum pressure difference.

Normal seal does not depend on sealing grease. If the seal is damaged and leaked, it can be injected into the seal grease for emergency repair.

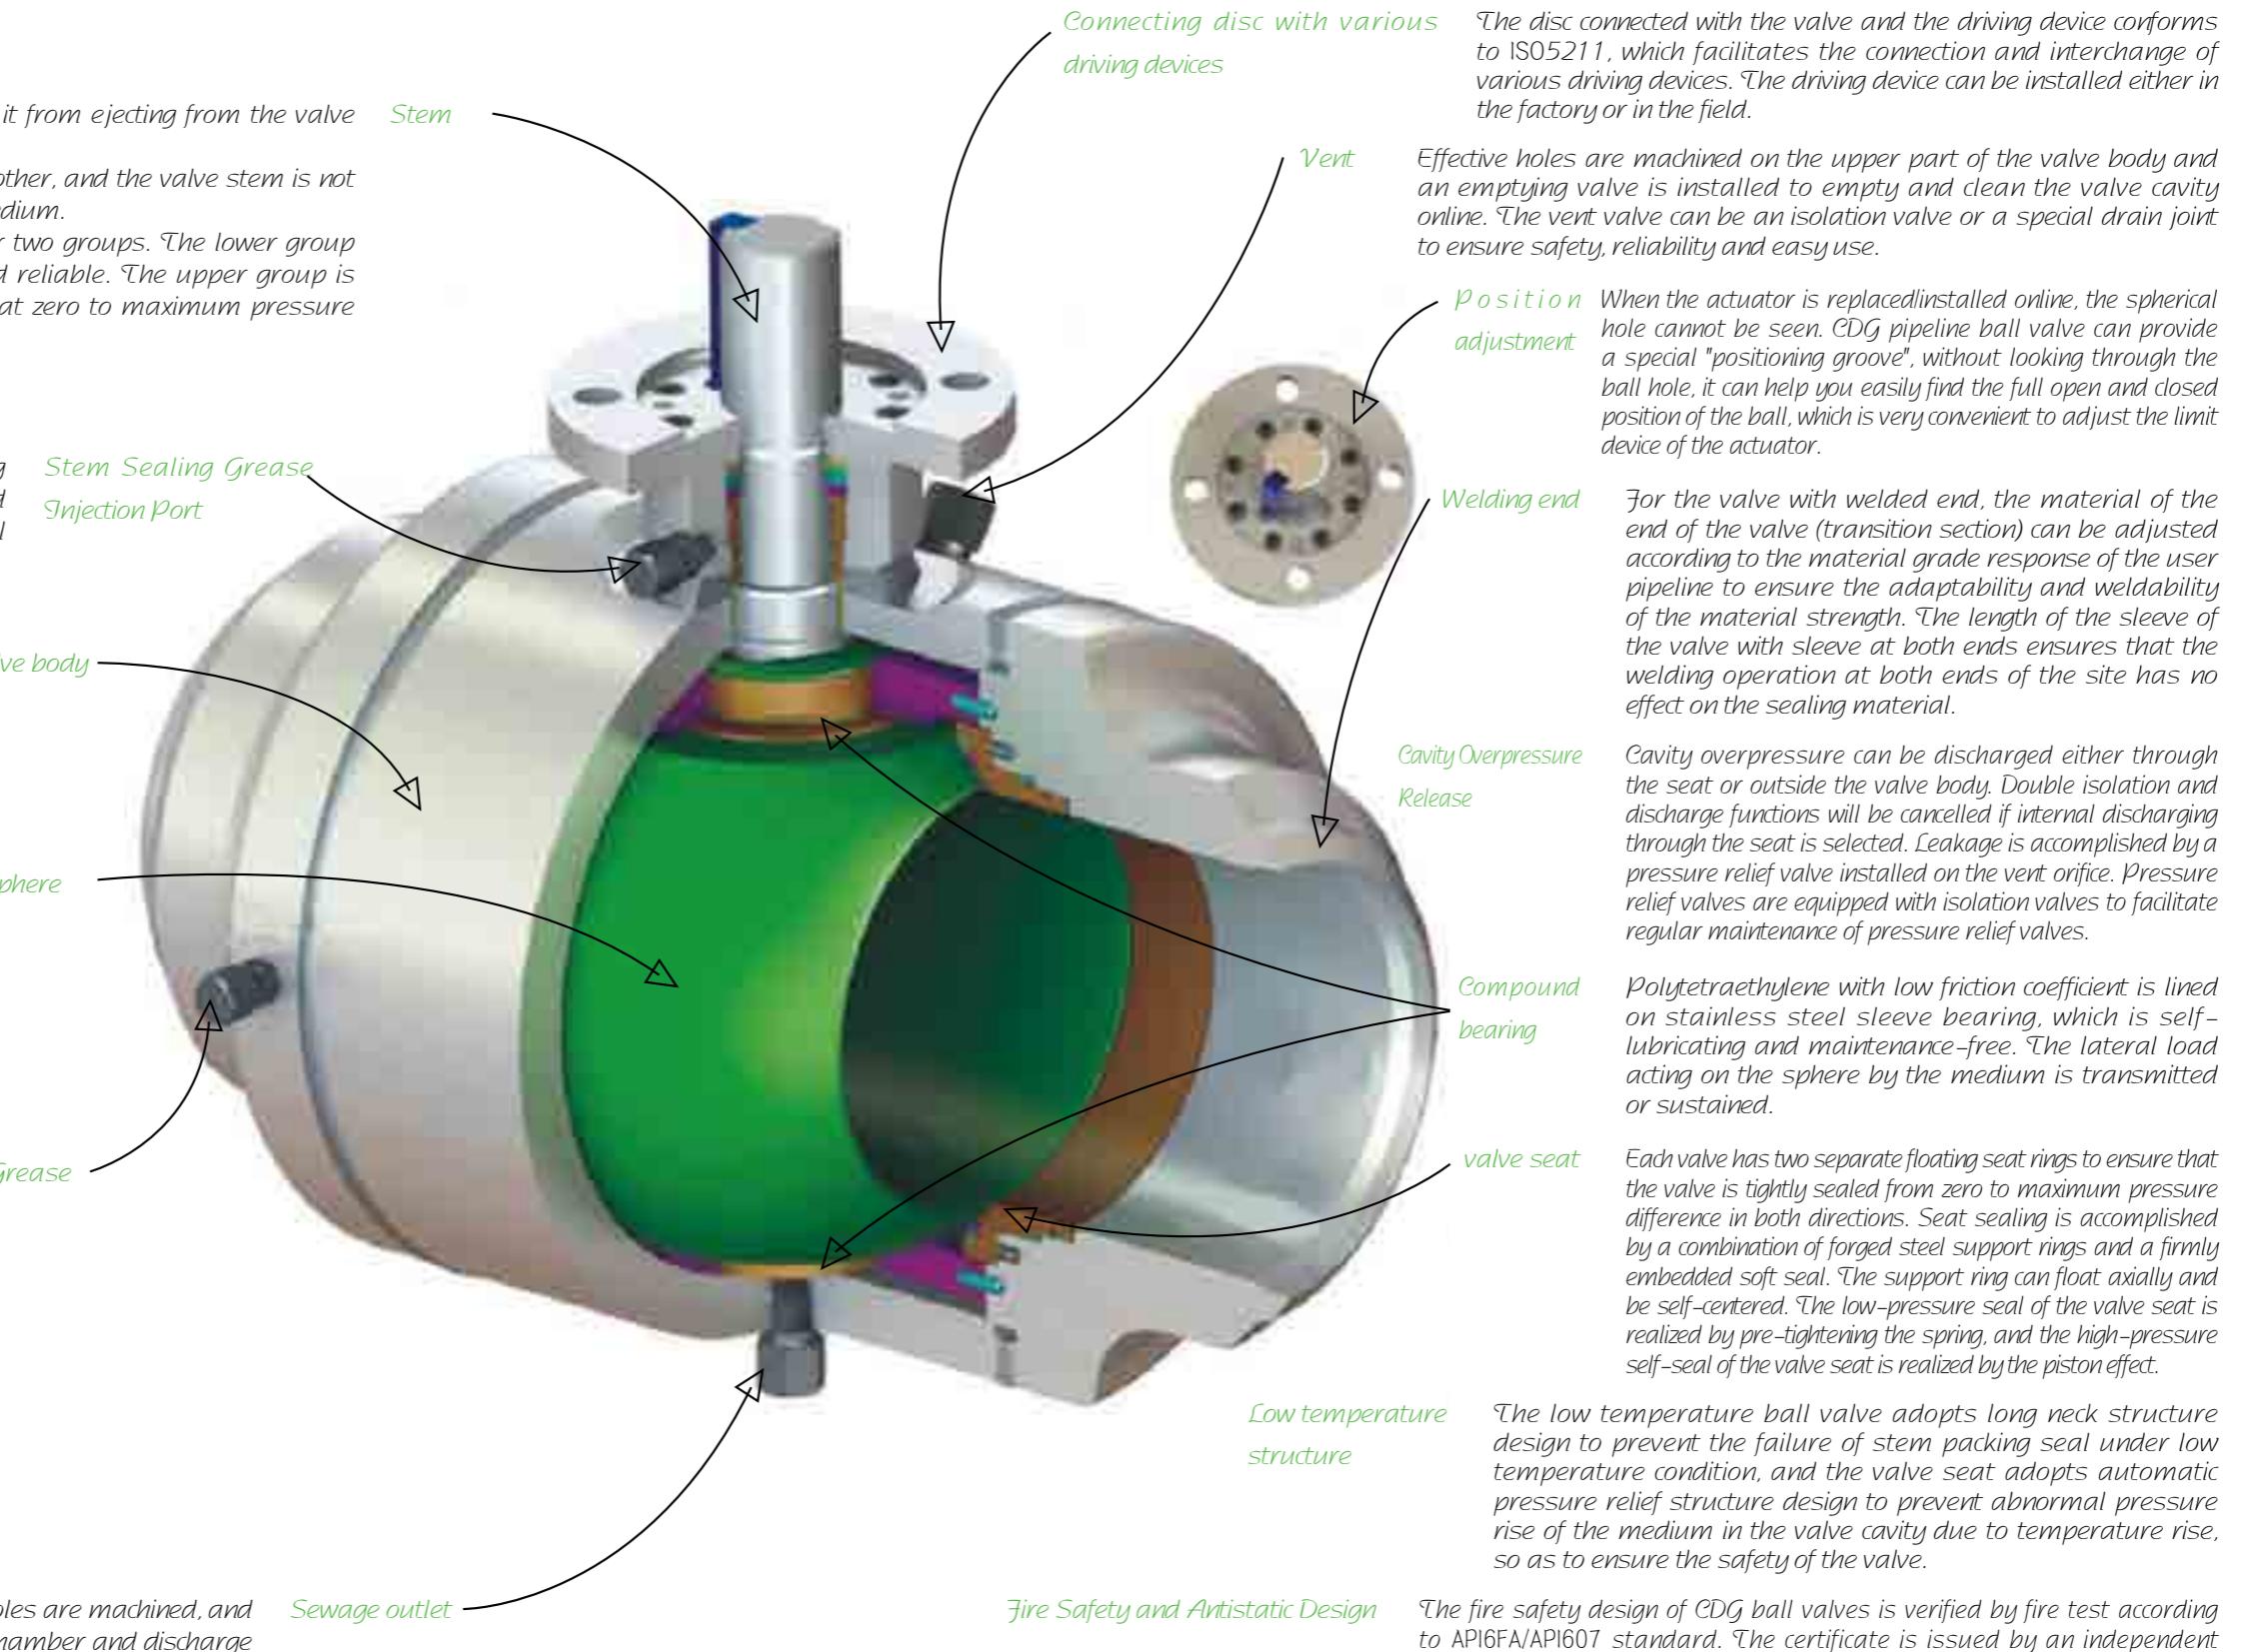

It is made of high quality materials and adopts **valve body** advanced welding technology for fully welded body structure. It can safely withstand or transmit the maximum pipeline pressure and external force, completely excluding the possibility of leakage.

The sphere is forged and fixed on the valve body by two symmetrical bearing seats. The lateral load acting on the sphere by the medium is transferred to the valve body through the bearing without affecting the stem, which realizes the pure torque operation.

Normal seal does not depend on sealing grease. If the seal is damaged and leaked, it can be injected into the seal grease for emergency repair.

A grease injection valve and an embedded one-way valve are installed at each grease injection orifice. Typical grease injection valves have safety caps to ensure their safe and reliable use. The end of the grease injection valves is a quick-connection snap of the grease injection gun.

At the lowest position of the valve body, sewage holes are machined, and sewage valves are arranged to empty the valve chamber and discharge sewage. The sewage discharge valve can be an isolation valve or a special discharge joint to ensure safety, reliability and convenient use.

The disc connected with the valve and the driving device conforms to ISO5211, which facilitates the connection and interchange of various driving devices. The driving device can be installed either in the factory or in the field.

Effective holes are machined on the upper part of the valve body and an emptying valve is installed to empty and clean the valve cavity online. The vent valve can be an isolation valve or a special drain joint to ensure safety, reliability and easy use.

When the actuator is replaced/installed online, the spherical hole cannot be seen. CDG pipeline ball valve can provide a special "positioning groove", without looking through the ball hole, it can help you easily find the full open and closed position of the ball, which is very convenient to adjust the limit device of the actuator.

For the valve with welded end, the material of the end of the valve (transition section) can be adjusted according to the material grade response of the user pipeline to ensure the adaptability and weldability of the material strength. The length of the sleeve of the valve with sleeve at both ends ensures that the welding operation at both ends of the site has no effect on the sealing material.

Cavity overpressure can be discharged either through the seat or outside the valve body. Double isolation and discharge functions will be cancelled if internal discharging through the seat is selected. Leakage is accomplished by a pressure relief valve installed on the vent orifice. Pressure relief valves are equipped with isolation valves to facilitate regular maintenance of pressure relief valves.

Polytetraethylene with low friction coefficient is lined on stainless steel sleeve bearing, which is self-lubricating and maintenance-free. The lateral load acting on the sphere by the medium is transmitted or sustained.

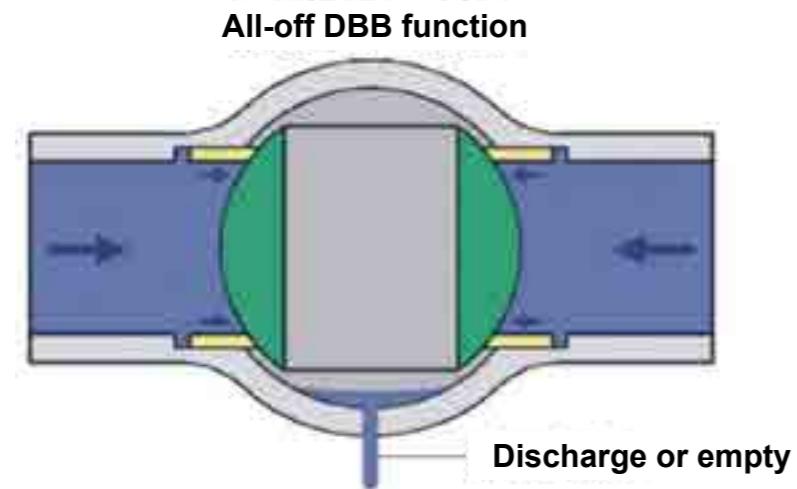

Each valve has two separate floating seat rings to ensure that the valve is tightly sealed from zero to maximum pressure difference in both directions. Seat sealing is accomplished by a combination of forged steel support rings and a firmly embedded soft seal. The support ring can float axially and be self-centered. The low-pressure seal of the valve seat is realized by pre-tightening the spring, and the high-pressure self-seal of the valve seat is realized by the piston effect.

The low temperature ball valve adopts long neck structure design to prevent the failure of stem packing seal under low temperature condition, and the valve seat adopts automatic pressure relief structure design to prevent abnormal pressure rise of the medium in the valve cavity due to temperature rise, so as to ensure the safety of the valve.

The fire safety design of CDG ball valves is verified by fire test according to API6FA/API607 standard. The certificate is issued by an independent international organization. All internal metal parts are electrically connected to the valve body, which meets the requirements of BS5351.

## Double Truncation and Emission (DBB)

When the sphere is in full open or closed position, the medium in the valve body cavity can be discharged through the sewage or vent device. At this time, the seats on both sides are cut off at the same time, and any side can withstand full pressure difference. With the DBB function, the ball valve can be drained or sewed online to check the seating integrity.

## Low Torque Design

Emergency shut-off valves on trunk lines of long-distance pipelines are almost always in full open position. They are usually driven by actuators and self-supporting emergency shut-off. They can shut down quickly when needed. Therefore, low-torque design is of great importance to the safety and reliability of their use.

## Buried design

The valve stem of the buried installation is lengthened according to the engineering requirement so as to operate on the ground, and the corresponding grease injection, sewage discharge and emptying devices are extended from the pipe to the ground.

## End connection

Valve end connections can be configured according to user requirements. Common connection modes include flange, butt welding, clamp or any combination.

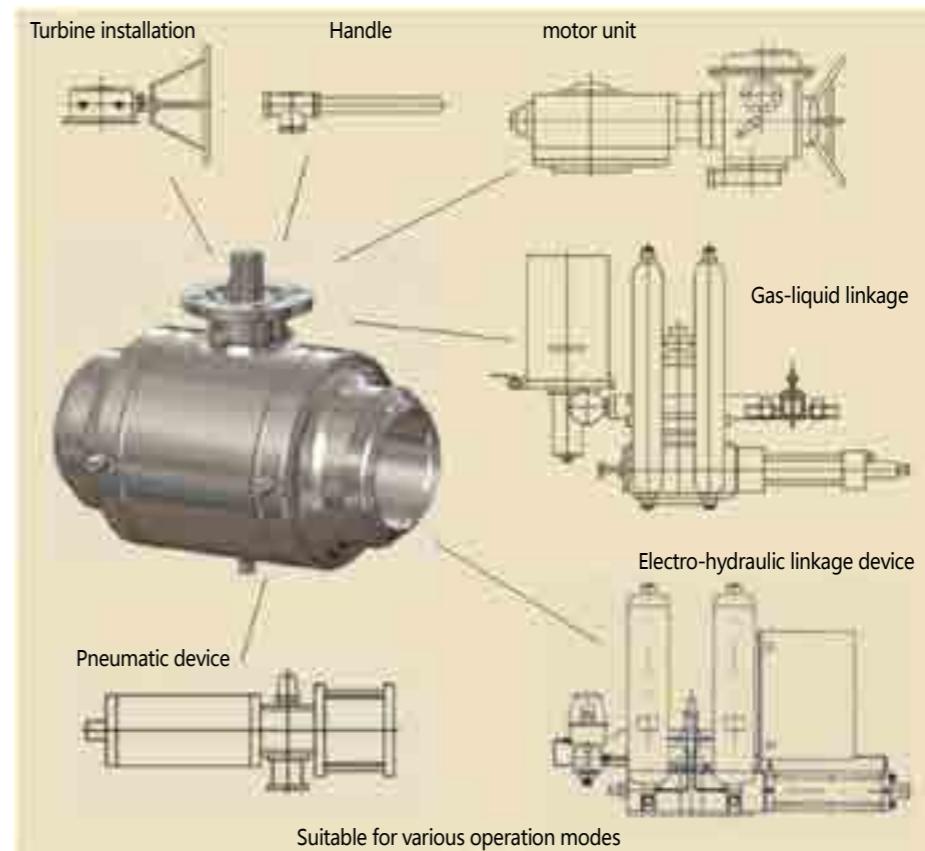

## Structural length

The length of the structure is stipulated by API6D and beyond the standard scope according to CDG enterprise standard. It can also be produced according to user's requirements.

## Outer coating

External coating design should take full account of the various corrosion in the environment to ensure the service life of the coating for 30-40 years.

## Valve operation

## Valve body welding

CDG has a set of mature welding technology with low residual stress and low toughness loss. The CTOD value of welded joint is used to evaluate the safety of post-weld heat treatment. The welding process between different materials of CDG has been certified by independent certification authority TUV, and the safety of welded joints has been evaluated by experts. All welding of CDG ball valves is performed by TUV certified welding engineers.

Special welding equipment using CDG proprietary technology

## Non-destructive inspection of welds

Necessary nondestructive inspection of welds is necessary to ensure the safety and reliability of products. The weld seam of CDG fully welded valve body is inspected by 100% multi-channel ultrasonic and radiographic inspection. There is no blind zone and no defect detection obstacle zone.

X-ray inspection of weld seam

## Surface treatment of spheres

Surface treatment of spheres can be selected in nickel and chromium plating according to the requirements of owners. The method of electroless plating is adopted to strictly comply with the technological requirements to ensure that the metal surface achieves the best hardness-to-corrosion performance ratio, and to achieve the maximum optimization of anti-erosion, anti-corrosion and friction coefficient reduction.

Electroless nickel plating

## Advanced processing equipment

Advanced equipment is necessary for manufacturing high-performance fully welded ball valve products. The key parts of CDG ball valve are processed by machining center and numerical control lathe. The one-time qualified rate of products and the interchangeability of parts are 100%, which make an important contribution to providing users with high-quality products.

Large Integrative Ball Machine for Turning and Milling

## Pressure test

CDG has several test platforms for hydraulic and pneumatic tests of all calibers and pressure class valves of 2"- 60" CL150 - CL2500. For each ball valve, CDG carries out pressure test and function test according to API6D, API598 or user requirements. CDG also takes high pressure gas seal test as a routine standard test.

## Special test

CDG also conducts a number of special tests to determine the performance of the ball valve. All tests are conducted in accordance with the standard specifications. The main test items are as follows:

1. Corrosion test of welded joints - Assessment of H2S corrosion resistance of welded joints;
2. CTOD test of welded joints - Evaluation of fracture toughness (crack arrest ability);
3. Linkage test with actuator - Evaluate the operation performance of valve connected with actuator;
4. Anti-explosion test of elastomer materials - Evaluation of burst resistance of elastomer under sudden pressure loss;
5. Antistatic test;
6. Fire test;
7. Seismic performance numerical simulation analysis of buried valves;
8. Performance test of anticorrosive coating;
9. Full-stroke Torque Testing-Evaluating the Operability of Valves;
10. The grease injection test - to evaluate the grease injection effect of the sealing system, should be uniformly distributed in the sealing area in a ring shape.
11. Bending, Tensile and Compression Tests - Assessment of the Valve's ability to withstand combined pipeline loads (as opposed to pipelines).

## Main materials

The material used for manufacturing valves meets the requirements of API6D and related standards, so that the performance of valves can adapt to working conditions and environmental conditions, and ensure service life. The following are commonly used materials. Other materials can also be selected according to engineering needs. CDG company chooses the corresponding material combination according to the actual working conditions to help you achieve the optimal cost performance ratio.

- ① Valve body: ASTM A105[mod] ASTM A350 LF2[mod] ASTM A182 F316[mod]
- ② Butt welding end adapter: Valve body ASTM A350 LF6[mod]
- ③ Sphere: ASTM A105+ENP ASTM A182 F316+HCr ASTM A350 LF2+ENP ASTM A182 F51
- ④ Stem: ASTM A182 F6a+HCr AISI 4140+ENP ASTM A564 630+HCr ASTM A182 F51
- ⑤ Seat metal ring: ASTM A105+ENP ASTM A350 LF2+ENP ASTM A182 F316+HCr ASTM A182 F51
- ⑥ Seat insertion ring: VTON\* VTON-GLT\* HNBR\* EPDM\* FFKM\* NYLON DEVLOM RPTFE PEEK
- ⑦ Type O: VTON\* VTON-GLT\* HNBR\* EPDM\* FFKM\* PTFE+AISI 301[LIP SEAL]
- ⑧ Bolts/nuts: ASTM A193 B7M/A194 2HM ASTM A193 B8M/A194 8M ASTM A320 L7M/A194 7M
- ⑨ Bearing: 316+[R]PTFE 316L+[R]PTFE
- ⑩ Pre-tightening spring: INCONEL X750 AISI 302

Note: Elastomeric materials with \* are used for pressure levels  $\geq$  CL600 , It should have the capability of pressure relief and anti-riot. For the medium containing H2S, materials conforming to NACE MR-01-75 standard are selected.

## Fully Welded Fixed Ball Valve with Forged Steel

### Application specification

- 1、Pressure and temperature grade: ASME B16.34、BS5351
- 2、Shell wall thickness: ASME B16.34、BS5351
- 3、Hole size: API6D、BS5351
- 4、Structure length: ASME B16.10、API6D
- 5、Connection dimensions: ASME B16.5、BS1560
- 6、Tests and inspections: API6D、BS5146
- 7、Subject material: A105、LF2、F304、F316、F304L、F316L

# Forged Steel Fixed Ball Valve

## Application specification

1. Pressure and temperature grade: ASME B16.34、BS5351
2. Shell wall thickness: ASME B16.34、BS5351
3. Hole size: API6D、BS5351

# Cast Steel Fixed Ball Valve

## Application specification

1、Pressure and temperature grade: ASME B16.34、BS5351

2、Shell wall thickness: ASME B16.34、BS5351

3、Hole size: API6D、BS5351

4、Structure length: ASME

B16.10、API6D

5、Connection dimensions: ASME

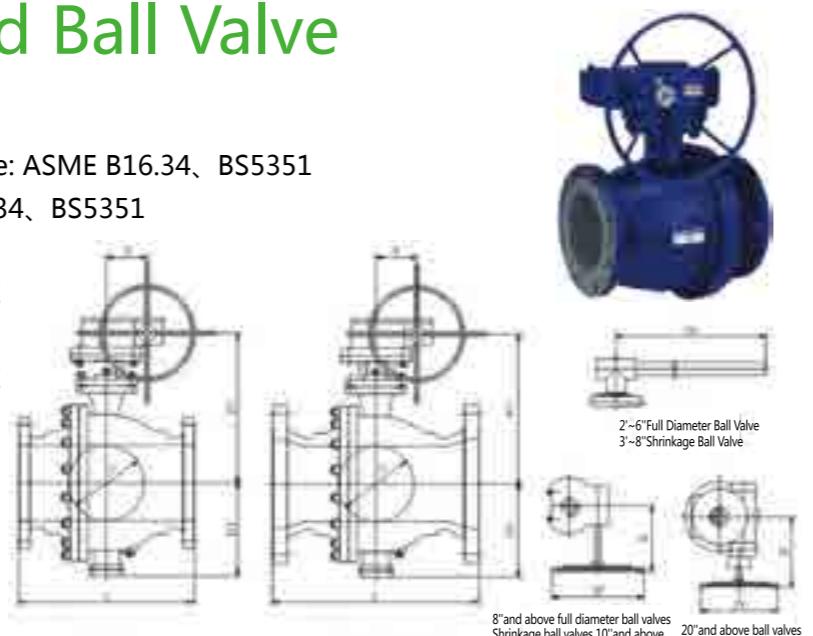

B16.5 ( MSSSP -44 ) 、 BS1560

6、Tests and inspections: API6D、

BS5146

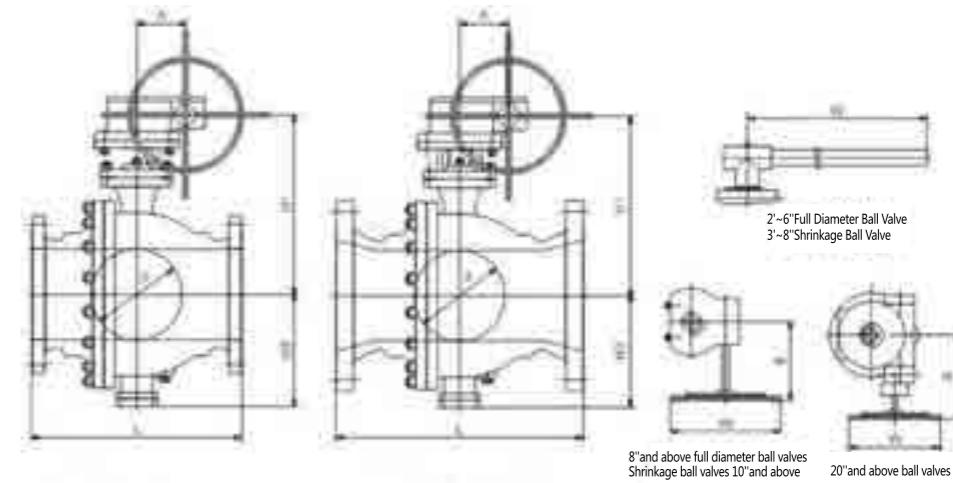

7、Subject material:WCB、LCB、

LCC、CF8、CF8M、CF3、CF3M
